MOVIMENTAZIONE E STRUMENTI CONSIGLIATI SUL CANTIERE

HANDLING AND RECOMMENDED TOOLS ON SITE

FIGURA 2
FIGURE 2

Le casse (o cavalletti) devono essere inforcate dal lato lungo con le forche da 2,5 mt. Le Lastre devono essere movimentate in verticale e nel caso di ponti l'imbragatura deve essere fatta con corde di canapa (sconsigliate catene di acciaio) per evitare rotture e/o sbeccature. In caso di stoccaggio su cavalletti di metallo questi devono essere rivestiti (legno o gomma).

Cases (or stands) must be lifted from the long side by placing 2.5 m long forks under them. Slabs must be vertically handled and, in case of bridges, the slinging must be made using hemp cloth (steel chains are not recommended) to prevent any breakage and/or chipping. In case of storage on metal stands, the latter should be coated (wood or rubber).

Per prese multiple si consiglia di utilizzare un bilancino e delle cinghie in tela distanziate sul fondo e sulla parte superiore da uno spessore in legno di lunghezza leggermente superiore al pacco lastre (come mostrato in figura 2). In questo modo la tensione esercitata durante la movimentazione non grava sulle lastre evitando rotture del materiale
Attenzione: verificare sempre la portata massima di carico.

For multiple grabs, the use of a lifting beam is advised, with canvas straps spaced out on the base and on the top by a wooden spacer slightly longer than the slab pack (as shown in figure 2). In this way the tension generated during handling is no applied to the slabs, avoiding the breakage of the material.
Warning: always check the maximum load.

NON SOVRAPPORRE MAI VOLUMI DIVERSI, PER EVITARE ROTTURE
TO AVOID BREAKAGE, NEVER STACK DIFFERENT VOLUMES

Per la movimentazione è consigliato utilizzare i kit in alluminio appositamente studiati per le lastre. I kit, dotati di ventose, limitano le torsioni e consentono il trasposto sia manuale (sempre in verticale) che su carrello. Per la movimentazione manuale sono necessarie 4 persone, movimentando in verticale dal lato lungo.

Use of the aluminium kits specially designed for the slabs is recommended for handling. The kits, with suckers, limit torsion and permit transport (always vertical) both manually and on forklift. 4 people are required for manual handling, handling vertically from the long side.

PULIZIA, MANTENIMENTO E CURA

CLEANING, MAINTENANCE AND CARE

Per la pulizia quotidiana è consigliata acqua tiepida ed eventualmente un detergente di uso quotidiano, per sporchi più intensi sono consigliati:

- **Acido:** detersivi acidi, disincrostanti, rimuovi cemento es. Viakal.
- **Alcalino:** detersivo basico, ammoniacca, sgrassante es. Chante Clair, Cif.
- **Solvente:** solvente universale, diluente, acquaragia, alcol
- **Ossidante:** candeggina, acqua ossigenata.

Dopo l'utilizzo sciacquare sempre abbondantemente con acqua.

For daily cleaning, lukewarm water and possibly a household detergent are recommended. The following are recommended for heavier dirt:

- Acid: acid detergents, de-fouling cleaners, cement remover e.g. Viakal.
- Alkali: basic, ammonia, degreasing detergent e.g. Chante Clair, Cif.
- Solvent: universal solvent, thinner, turpentine, white spirit, alcohol
- Oxidant: bleach, hydrogen peroxide.

After use, always rinse well with plenty of water.

GUIDA ALLA RIPARAZIONE:
Riparare piccolissime sbecature è possibile. Le mani esperte possono ripristinare piccolissime sbecature con delle resine epossidiche anche se non è semplice trovare i giusti toni e ripristinare la superficie originale. Una volta riparata la sbecatura, rimuovere la resina in eccesso con un panno imbevuto di acetone prima che indurisca. Una volta indurita lavorare la resina manualmente per omogenizzarla alla superficie.

GUIDE TO REPAIR:
Very small chipping can be repaired. Expert hands can restore very small chipping with epoxy resins, even though it is not easy to find the right tones and restore the original surface. Once the chipping is repaired, remove the excess resin with a cloth soaked in acetone before it hardens. Once it has hardened, work the resin by hand to make the surface uniform.

TIPO DI SPORCO TYPE OF DIRT	TIPOLOGIA DI DETERGENTE TYPE OF DETERGENT
Birra, vino, caffè Beer, wine, coffee	Soluzione di Sodio Ipoclorito (candeggina) o detergente alcalino Sodium hypochlorite (bleach) in solution or alkaline detergent
Gelato Ice cream	Soluzione diluita di sodio ipoclorito (candeggina) Sodium hypochlorite (bleach) in diluted solution
Gomma di pneumatico Tyre rubber	Solvente organico (trielina, diluente) Organic solvent (trichloroethylene)
Grassi e oli Greases and oil	Detergente a base alcalina Alkali-based detergent
Inchiostri Inks	Soluzione di Sodio Ipoclorito (candeggina) o detergente alcalino Sodium hypochlorite (bleach) in solution or alkaline detergent
Lampostil (pennarello indelebile) Indelible felt-tip	Solvente organico (acetone trielina) Organic solvent (trichloroethylene acetone)
Resine Resins	Solvente organico (acqua ragia, diluente) Organic solvent (turpentine, white spirit, thinner)
Rigature da alluminio Lines from aluminium	detergente acido o detergente abrasivo in crema/polvere Acid detergent or abrasive cream/powder detergent
Ruggine Rust	Detergente a base acida Acid-based detergent
Succhi di frutta Fruit juices	Soluzione diluita di sodio ipoclorito (candeggina) Sodium hypochlorite (bleach) in diluted solution
Altre macchie Other stains	Detergente abrasivo in crema Abrasive cream detergent

PARAMETRI PARAMETERS

- Minore è il diametro del disco, maggiore è la velocità di rotazione al mandrino.
- Minore è la velocità di avanzamento, maggiore è la qualità del taglio.
- Una minore velocità di avanzamento permette di realizzare una bisellatura ridotta del bordo.
- La velocità di ingresso e di uscita devono sempre essere ridotte del 50% rispetto la velocità di regime.
- Orientamento corretto e quantità di acqua.
- La parte più esposta del disco deve essere ridotta il più possibile, considerando almeno 1mm circa di trapasso oltre lo spessore della lastra.
- La lavorazione avviene con successo se le vibrazioni dovute al taglio sono ridotte al minimo. Per limitare tali vibrazioni è consigliabile mettere sotto la lastra un pannello di legno o di gomma.

- The smaller the disc diameter, the greater the spindle rotation speed.
- The lower the feed speed, the greater the cutting quality.
- A lower feed speed ensures finishing with reduced chamfer on the edge.
- The infeed and outfeed must always be 50% less than nominal working speed.
- Correct positioning and amount of water.
- As little of the disc as possible must be exposed, considering at least 1mm passing beyond the thickness of the slab.
- Successful machining will be ensured if the vibrations emitted by the cutting operations are reduced to a minimum. To limit the vibrations, place a disposable wooden or rubber-based panel under the slab.

STUOIATURA FIBERGLASS MESH

Nuovocorso prevede su richiesta l'applicazione di una stuoia in fibra di vetro sul retro tramite processo industriale automatizzato, in questo modo il materiale offre notevoli performance.

VANTAGGI

- Aumento della resistenza meccanica e all'urto.
- Aumento della resistenza del pezzo lavorato nelle successive movimentazioni.
- Aumento della lavorabilità della lastra: tagli, forature, ecc.
- Maggiore sicurezza, in caso di rottura, tiene insieme i cocci.

La stuoiaatura è indicata per tutte le destinazioni d'uso che non prevedono la posa incollata come arredi, top bagno e cucina e in tutte le applicazioni dove le lastre sono particolarmente sollecitate.

Nuovocorso provide on request for application with a fibreglass mesh during an automated industrial process, in this way the composite material obtained offer greater performance.

ADVANTAGES

- Increased mechanical strength and impact-resistance.
- Increased resistance of the machined piece during subsequent handling.
- Increased slab machinability: cutting, drilling, etc.
- Increased safety as it holds the pieces together in the event of breakage.

Fibreglass mesh is suitable for all uses that do not require gluing for installation, such as furnishing elements, bathroom and kitchen tops and all those applications in which the slabs are subjected to particular stress.

POSA LAYING

È fondamentale verificare la planarità, la differenza massima consentita è di 1 mm ogni 2 metri.

- **Si raccomanda l'applicazione della colla con doppia spalmatura. La prima, sulla lastra da posare, deve essere parallela al lato corto. Mentre la seconda, nella stessa direzione, deve essere applicata al massetto.**
- **Per evitare che le lastre si scheggino durante la fase di posa si consiglia l'uso di un apposito dispositivo per l'accostamento delle lastre.**
- **È necessario l'utilizzo di sistemi di livellatura per rendere perfetta la planarità della superficie posata.**
- **Una volta adagiata la lastra, per eliminare completamente eccessi di aria, è necessario effettuare una battitura, manuale o meccanica, con l'apposito frattazzo anti-rimbalzo, procedendo dal centro verso i lati esterni.**

It is essential to check warpage; the maximum tolerance permitted is 1 mm every 2 metres.

- A double layer of glue is recommended. The first, on the slab to be laid, must be parallel to the short side, while the second must be applied to the base, and spread in the same direction.
- To avoid the slabs being chipped during laying, an appropriate device should be used for placing the slabs next to one another.
- Levelling systems are recommended to ensure the surface laid is perfectly level.
- Once the slab is in position, excess air should be removed completely by tapping it either manually or mechanically using the appropriate trowel, starting from the centre and moving out towards the sides.
